

INFERTILITY

The causes and reasons for infertility are vast. Homeopathy considers causations to health events as a big indicator for prescriptions. There is nearly always some event that precipitates any imbalance in health.

For infertility the possible causations may be:-

- (i.) a long history of using the hormone pill or use of morning after pill (MAP).
- (ii.) suppression of periods with the hormone injection
- (iii.) use of hormone implants with the coil
- (iv.) history of STDs – e.g. Chlamydia, gonorrhoea, syphilis etc.
- (v.) history of endometriosis, polycystic ovarian disease (PCOD)

Any one or more of these conditions can bring with it mental/emotional symptoms to a greater or lesser degree.

Homeopathy understands the individual expression of symptoms and not just a few collective symptoms gathered into a disease label warranting a single treatment for the collective female population.

An appointment with a homeopath can help you to untangle possible causations to your infertility and find the remedy(ies) to hopefully allow a safe, healthy conception to birth journey without the use of artificial hormones and a regimented sexual relationship.
